

Screw technology, always exactly where it is needed.

Our ec-mobile is a mobile, controlled screwdriving station that combines key features and products from ec-tecs into a flexible solution. Thanks to the integrated PC and uninterruptible power supply (UPS), the ec-mobile can be used almost anywhere – even where no direct power supply is available.

This makes ec-mobile a significant contributor to reducing downtime on assembly lines. In the event of a tool failure, the assembly process can be secured at short notice and the line's production capacity maintained.

The ec-mobile is designed for flexible use directly in production. It combines screwdriving technology, operator guidance, documentation, ergonomics, and mobility in a single system. Thanks to its integrated WLAN module, devices such as socket boxes, torque wrenches, or other screwdrivers that communicate via WLAN can be connected.

Usable everywhere

Complete documentation

Minimize downtime

Full flexibility

Detachable screen

Socket boxes can be integrated

Scanners and charging stations

Removable tool tray

PC, screwdriver controller, WLAN module and UPS

ec-tecs provides you with everything from a single source:

Hardware, software, assembly and repair - contact us now for an initial workplace analysis.
